to provide a reaction product containing 70 mass% C₅-C₁₈ alcohols,

converted into the corresponding substituted triazine derivatives with standing times of 1 to 60 min with distilling of C_1 - C_8 alcohols at 60 to 250° C/0.05 to 1 bar wherein through the molar ratio C_1 - C_8 -alkyl-oxa- C_1 - C_8 -alkylene-amino groups / diol used and/or bisepoxide used of 20 : 1 to 1.1 : 1 a partial re-etherification of the C_1 - C_8 -alkyl ether groups of the C_1 - C_8 -alkyl-oxa- C_1 - C_8 alkylene amino triazines is achieved,

further condensing the amino triazine ethers to polytriazine ethers in the melt obtained which contains etherified amino triazine derivatives and proportions of polytriazine ethers and unconverted or unseparated diol and furthermore can contain C₅-C₁₈ alcohols is dosed into a kneader, converted with a standing time of 2 to 12 min at 140 to 220°C with degassing and the polytriazine ethers are removed and granulated wherein the melt, before dosing into a kneader, are optionally subjected to tempering of 20 to 120 min at 70 to 140°C, up to 75 mass% fillers, further reactive polymers selected from the group consisting of ethylene copolymers, maleic acid anhydride copolymers, modified maleic acid anhydride copolymers, poly(meth)acrylates, polyamides, polyesters and polyurethanes and up to 2 mass%, each in relation to the polytriazine ethers, stabilisers, and/or UV absorbers are added to the melt and optionally subjecting the melt to a melt filtration before removal.

Claim 26 (new): The process for the production of amino resin moulding materials according to Claim 25, wherein as ionic catalysts and/or for the neutralisation of the reaction deposit anorganic or organic acids, bases, ion exchanging resins and/or acid zeolites are used.

Claim 27 (new): The process for the production of amino resin moulding materials according to Claim 25, wherein the etherification of the precondensates with C_1 - C_8 alcohols is performed in the presence of 10 to 300 mass%, in relation to the dry substance of the precondensates used, molecular sieveing.

Claim 28 (new): The process for the production of amino resin moulding materials according to Claim 25, wherein the partial re-etherification of the C₁-C₈-alkyl-oxa-

C₁-C₈-alkylene-amino-substituted triazine derivatives is performed catalytically in the presence of strong acids at temperatures in the range of 100-175°C.

Claim 29 (new): The process for the production of amino resin moulding materials according to Claim 25, wherein the process of partial re-ehterisation of the C_1 - C_8 -alkylene-amino-substituted triazine derivatives is performed thermally at temperatures in the range of 150-250°C.

Claim 30 (new): The process for the production of amino resin moulding materials according to Claim 25, wherein the process for the further condensation of the amino triazine ethers to polytriazine ethers mixtures of products of different initial products or mixtures of products C_1 - C_8 -alkyl-oxa- C_1 - C_8 -alkylene-amino- substituted triazine derivatives which have not been re-etherified are used.

Claim 31 (new): The process for the production of amino resin moulding materials according to Claim 25, wherein all steps of the process are performed one after the other in a reaction installation.

Claim 32 (new): Melt adhesives, plates, pipes, profiles, injection moulded components, fibres, foams, impregnation resins, paint resins or laminating resins, or micro-capsules comprising the amino resin moulding materials according to Claim 23.

Claim 33 (new): Amino resin products with improved flexibility, comprising the amino resin moulding materials according to Claim 22.

Claim 34 (new): The amino resin products according to Claim 33, wherein the amino resin products are semifinished products produced through melt processing, wherein the products are selected from the group consisting of plates, pipes, profiles, coatings, foams, fibres, forming substances, injection moulded components, and components produced from fibres according to winding, braiding or pultrusion technology and subsequent resin impregnation.

are combined through bridging members -NH-CHR₂-O-R₄-O-CHR₂-NH- und -NH-CHR₂-NH- and optionally -NH-CHR₂-O-CHR₂-NH- to 20 to 1000 nuclei polytriazine ethers with linear and/or branched structure,

wherein in the polytriazine ethers the molar ratio of the substituents is $R_3: R_4 = 20: 1$ to 1:20,

the proportion of the combinations of the triazine segments through bridging members - NH-CHR₃-O-R₄-O-CHR₃-NH- is 5 to 95 mol%,

and wherein the amino resin moulding materials can contain up to 75 mass% fillers and/or adsorber materials, up to 50 mass% further reactive polymers of the type ethylene copolymers, maleic acid anhydride copolymers, modified, maleic acid anhydride copolymers, poly(meth)acrylates, polyamides, polyesters and/or polyurethanes, up to 20 mass% diols of the type HO - R₄ - OH, and up to 2 mass% stabilisers, UV absorbers, hardening agents and/or auxiliary substances,

in continuous kneaders at mass temperatures of 105 to 260°C and standing times of 2 to 12 min and with hardening of the polytriazine ethers according to usual processing methods for thermoresin polymers

A) placing as a melt on a smoothing device and taken out as a plate by means of conveyor belts and cut or sealed on surface guides made from metallised films, synthetic films, paper guides or textile guides and removed and processed as multicomponent composites,

or

B) taking out via a profiled opening and removed, cut and processed as a profile or plate material,

or

C) taking out via an annular opening, removed with pressing of air as a pipe, removed, cut and processed,

or

D) after dosing of blowing agents removed taking out via a wide slot opening and removed as a foamed plate material,

or

E) taking out via the wide slot opening of a pipe coating installation and sealed in a fusible manner onto the rotating pipe,

or

F) processing into injection moulded components in injection moulding machines, having three zone worms with a worm length of 18 to 24 D, high injection speeds and with tool temperatures of 70 to 150°C,

G) extruding in melt spinning installations by means of melt pump through the capillary tool into the blow shaft and taken out as threads or after the melt-blow process separated off as fibres or after the rotation spinning process taken out as a melt into a shear field chamber with organic dispersing agents with the formation of fibre fibrides and further processed in subsequent devices,

K) melt impregnating component blanks produced according to the winding process, braiding process or pultrusion process,

and optionally for complete hardening the products subjecting to subsequent thermal processing at temperatures of 180 to 280°C and standing times of 20 to 120 min.

Claim 40 (new): The process for producing amino resin products according to Claim 39, wherein the polytriazine ethers contained in the amino resin moulding materials used are 30 to 300 nuclei polytriazine ethers.

Claim 41 (new): The process for producing amino resin products with improved flexibility according to Claim 39, wherein the polytriazine ethers contained in the amino resin moulding materials used are polytriazine ethers with $R_2 = H$.

Claim 42 (new): The process for producing amino resin products with improved flexibility according to Claim 39, wherein the hardening agents contained in the amino resin moulding materials used are weak acids selected from the group consisting of:

- blocked sulphonic acids,

- aliphatic C₄-C₁₈ carbonic acids,
- alkali salts or ammonium salts of phosphoric acid,
- C₁-C₁₂ alkyl esters or C₂-C₈ hydroxyalkyl esters of C₆-C₁₄ aromatic carbon acids or anorganic acids,
- salts of melamine or guanamines with C₁₋₁₈ aliphatic carbonic acids,
- anhydrides, semi-esters or semi-amides of C₄-C₂₀ dicarbonic acids,
- semi-esters or semi-amides of copolymers of ethylenically unsaturated C₄-C₂₀ dicarbonic acid anhydrides and ethylenically unsaturated monomers of the type C₂-C₂₀ olefines and/or C₈-C₂₀ vinyl aromates,
- and
- salts of C₁-C₁₂-alkyl amines or alkanol amines with C₁-C₁₈ aliphatic, C₆-C₁₄-aromatic or alkyl aromatic carbonic acids as well as anorganic acids of the type hydrochloric acid, sulphuric acid or phosphoric acid.

Claim 43 (new): The process for producing amino resin products according to Claim 39, wherein the production of fibre fibrides from the amino resin moulding materials is effected through

- introducing the melt via entry openings at melt temperatures of 160 to 220°C into a shear field chamber which contains high boiling organic dispersion agent heated to 150 to 210°C, preferably paraffin oil or engine oil, wherein acid gases, preferably chlorohydrogen or sulphur dioxide are introduced into the shear field chamber, and wherein the melt stream leaving the entry opening is extended and divided through the oil whirled about by the rotor with the formation of fibres,
- conveying the dispersion of the fibre fibrides formed in organic dispersion agent into a sieve separator with simultaneous extraction of the high boiling dispersion agent with low boiling hydrocarbons, preferably hexane or heptane,
- removing the fibre fibride short fibre fleece and optionally subsequent thermal treating of the short fibre fleece at temperatures of 180 to 210°C and standing times of 40 to 120 min.

Claim 44 (new): Foam plates as isolation components, in the form of plates as panelling elements, in the form of pipes and hollow profiles in ventilation technology, in the form of injection moulded components as functional components, and fibres for the production of electro-isolation papers, fire protection clothing, clothing for high working temperatures, fire protection blankets, filter fleeces, felts for paper machines and vehicle and machine isolation covers, or containers or profiles according to the winding, braiding or pultrusion process comprising the amino resin products according to Claim 33.
